It currently consists of 13 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence * as soon as it is available and the accession number will * be preserved.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc

## SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
(http://bacpac.med.buffalo.edu)

# NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the right is RP11-71B7. Actual start of this clone is at base position 1 of RP11-134N21; actual end is at base position 168862 of RP11-134N21.

Data from AC068165 and AC092432 was used to finish this clone, AC073464.

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

on Jul 22, 2000 this sequence version replaced gi:8977609.

During sequence assembly date is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission colly a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw.: SMISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group. Further information can be found at http://www.sanger.ac.uk/FGP/Chr9

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by thigh quality data (1.e., phred quality) as compressions and repeats; all regions were covered by at least one planning was confirmed by resolve all sequencing problems, such as campressions and repeats; all regions were covered by at least one planning subclone or more than one Mill subclone; and the assembly was confirmed by resolve all sequencing problems, such the library RPCI-II.1 constructed by the group of Pieter de Jong. For the Library RPCI-II.1 constructed by the group of Pieter de Jong.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AL137070 Human DNA sequence from clone RP11-251017 on chromosome 9 Contains 2 calponin 2 (CNNZ) pseudogenes, a gene for a novel protein similar to aduaporin 7 (AQP7), part of gene for a novel protein similar to methylenetetrahydrofolate dehydrogenase(NADP+ dependent), methenyltetrahydrofolate cyclohydrolase, formyltetrahydrofolate synthetase (MTHFD1) and a CPG island, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                 ó
                                                                                                                                                                                       This invention describes a coconut foliar decay virus (CFDV) DNA fragment that includes the stem-loop structure of CFDV DNA but lacks the translation start codons of open reading frames ORF1 and/Or ORF2. The new CFDV DNA fragment is useful as a bacterial or yeast promoter, as a promoter for tissue-specific (especially phloem-specific) gene expression in plants and for production of chimeric constructs for transient or stable expression. Certain fragments of CFDV DNA have stronger promoter activity in E. coli than the CaMV 35s promoter.

```
This invention describes a coconut foliar decay virus (CFDV) DNA fragment that includes the stem-loop structure of CFDV DNA but lacks the translation start codons of open reading frames ORF1 and/or ORF2. The new CFDV DNA fragment is useful as a bacterial or yeast promoter, as a promoter for tissue-specific (especially phloem-specific) gene expression in plants and for production of chimeric constructs for transient or stable expression. Certain fragments of CFDV DNA have stronger promoter activity in E. coli than the CaMV 355 promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antiviral; antibacterial; antifungal; antirheumatic; antithyvoid; antiviral; antibacterial; antifungal; antirheumatic; antithyvoid; antiviral; gene therapy; cancer; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation; thrombosis; contraceptive; ss.

antiposotiatic; antiparkinsonian; nootropic; neuroprotective; costeopathic; antiponvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coaqulant; vasotropic; timmunostimulant; cardiant; thrombolytic; coaqulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, auttoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, concurrant invinities therapy antiminatory disease, to enhance complements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Secreted protein; human; gene therapy; diagnosis; treatment; cancer; protein therapy; tumor; neurodegenerative disorder; blood disorder; AIDS; developmental abnormality; leukemia; immune system; autoimmune disease; hepatic disease; renal disease; inflammation; allergy; schizophrenia; Alzheimer's disease; cognitive disorder; arthritis; infection; psoriasis; transplant rejection; diabetes; asthma; sepsis; acne; metabolic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;
                                                                                                                                                                                                                                                                                                                                                          Novel nucleic acids and peptides derived from open reading frame X, useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0

This invention describes novel human genes and the secreted proteins they encode. The polynucleotides and their corresponding secreted proteins they encode. The polynucleotides and their corresponding secreted polynucleotides are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the polynucleotides of the invention, based on which tissues they are most canned cancer, tumors, neurodegencrative disorders, developmental annormalities, blood disorders, leukemias, diseases of the immune system, autoimmune diseases, hepatic and an enal disease, inflammation, allergies, autoimmune diseases, hepatic and disease, inflammation, allergies, infections, AIDS, transplant rejection, diabetes, asthma, sepsis, acne, polymeptides or polymucleotides can also be used as food additives or inflammations. The polypeptides are also useful for identifying their which in arthers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder;

                                                                                                                                                                                                                                                                          The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment antiboder and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, presst,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention provides a human fatty acid transport protein (hFATP).

hBATP is believed to be involved in the modulation long-chain fatty acid metabolism; the protein and polynuclectides therefore enable production of compositions comprising a component requiating (inhibiting or compositions comprising a component requiating (inhibiting or compositions comprising a component requiating (inhibiting or compositions to the hFATP gene useful therapeutically to alter intracellular or blood levels of long chain fatty acids. Such compounds are especially useful to treat conditions associated with deficient regulation (e.g. may comprise an inhibitor to treat cardiomyopathies or diabetes or an enhancer to treat obesity. The polynucleotides are also useful to screen compounds for their effects on hFATP expression, e.g. by measuring mRNA transcription in cells/cell extracts (e.g. liver cells) contacted with the compound and comparing with that in noncontacted with the compound and comparing with that in noncontacted cells. Sequences AMX38122-123 represent nucleotide sequence of adipose tissue. The present sequence represents an alternative spliced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         vanin-I; glycosyl hydrolase; glucohydrolase;

         coquences AAZ49235, AAZ49239, AAZ49242 and AAZ49259 represent human hydrolase homologue HHH-6 cDNA fragments. The full-length cDNA sequence is given in AAZ49228. Nucleic acids encoding HHH-6 cDNA sequence is given in AAZ49228. Nucleic acids encoding HHH-6 were initially identified in a uterine endometrium tissue cDNA covery HHH-6 has homology to NacetyJqlucosamine 6-p deacetylase. The invention relates to human hydrolase have homologues HHH-1 to HHH-7 (AAY58165-Y5817) which respectively have homology to N-terminal asparagine amidohydrolase, vanin-1, glycosyl hydrolases, glucohydrolase and N-acetyJglucosamine 6-p deacetylase. Such homologues are useful in methods for diagnosing, treating or preventing disorders associated with expression of hydrolases. The hydrolase homologues are useful for treating or preventing a carbohydrate metabolism disorder. Antagonists of these hydrolases can be used to treat or prevent a reproductive or cell

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes their use in the discovery of novel antibiotics, the essential comes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus almonella typhi, Klebsiella convention is also useful for the identification of potential new targets invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery for programmes. The antisense nucleic acid sequence is also useful to screen corporate to the antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein.

Converse the sequence data for this patent did not form part of the printed specification, but was obtained in electronic to the print of the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acids encoding human kinase polypeptides, useful for preventing diagnosing and/or treating e.g. cancer, immune, cardiovascular and neuronal-associated diseases, and microbial infections -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human, protein kinase, PTK, STK; cancer; cardiovascular disease; metabolic disorder; immune related disease; neurological disorder; neurodegenerative disorder; inflammatory disorder; infectious disease; reproductive disorder; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

CC novel protein kinases have been identified as members of the tyrosine cor serine/threadine kinase (PTK and STK) families. The polynucleotides cor serine/threadine kinase (PTK and STK) families. The polynucleotides cording protein kinases and the polypeptides may be used in the encoding protein kinases and the polypeptides may be used in the inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoletic origin), cardiovascular cancers (especially cancers of haematopoletic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), cancers (e.g. schizophrenia), neurodegenerative disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. aschizophrenia), neurodegenerative disorders (e.g. disease), inflammatory disorders (e.g. infertility).

CC disorders (e.g. HIV) and reproductive disorders (e.g. infertility).

CC disease (e.g. HIV) and reproductive disorders (e.g. infertility).

CC disease (e.g. HIV) and reproductive disorders (e.g. infertility).

CC disease (e.g. HIV) bolypeptides may be used as antigens in the production kinase polypeptides may be used as antigens in the productive of antibodies against the protein kinases and in assays to identify as modulators of protein kinase expression and activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; lummunomodulatory; muscular active general; vulnerary; gastrointestinal activity. The invention antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58499 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Lung cancer associated gene sequences, referred to as lung cancer antigens, useful for treatment, prevention, and diagnosis of disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                  Human; lung cancer associated protein; neuroprotective; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 1658;
  Lung cancer associated polynucleotide sequence SEQ ID 228.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Indels

The FATP from M. tuberculosis and Cochliobolus heterostrophus. The FATP from M. tuberculosis can be used to identify inhibitors which can then be used to used to develop anti-fungal agents capable of preventing infection of tice. Those from the human can be used to develop treatments for diabetes, heart disease, obesity, hyperlipidaemia and weight control. The present sequence is one of the sequences described in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fatty acid transport protein; FATP; human; mouse; rat; rice blast fungus; yeast; fat absorption; obesity; diabetes; heart disease; hyperlipidaemia; weight control; tuberculosis; TB; anti-fungal; ds.

(UNIW ) UNIV WASHINGTON.

```
The present invention provides the protein and coding sequences of fatty acid transport proteins (FATPS) from a number of species, including FATP1, FATP2, FATP4, FATP5 and FATP6 from the human, FATP1-FATP5 from the mouse, FATPa and b from c. elegans, and FATP from Aspergillus nidulans, Drosophila, zebrafish, Magnaporthe grisea, Mycobacterium tuberculosis and cochliobolus heterostrophus. The FATP from M. tuberculosis can be used to identify inhibitors which can then be used to tase to the fath of the from M. grisea (also known as rice blast fungus) can be used to develop anti-fungal agents capable of preventing infection of rice. Those from the human can be used to develop treatments for diabetes, heart disease, obesity, hyperilpidaemia and weight control. The present sequence is one of the sequences described in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

The invention provides a human fatty acid transport protein (hFATP).

The invention provides a human fatty acid transport protein (hFATP).

The provides is believed to be involved in the modulation long-chain fatty acid metabolism; the protein and polynocleotides therefore enable production of compositions comprising a component regulating (inhibiting or compositions comprising a component regulating (inhibiting or later acid intracellular or blood levels of long chain fatty acids. Such compounds are especially useful to treat conditions associated with deficient regulation (e.g. may comprise an inhibitor to treat cardiomyopathies or diabetes or an enhancer to treat obesity. The polynucleotides are also useful to screen compounds for their effects on heATP expression, e.g. by measuring mRNA transcription in cells/cell extracts (e.g. liver calls) contacted with the compound and comparing with that in non-contacted with the compound and comparing with that in non-contacted cells. Sequences AAZ38122-123 represent nucleotide sequence of adipose tissue. The present sequence represents a cDNA library of human human human manners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
